

SHAIK SHADIK

B.Tech CSE Student • AI & Automation Builder

Khammam, Telangana • +91 8309432965 • shaikshadik003@gmail.com

[Portfolio](#) • [GitHub](#) • [LinkedIn](#) • [LeetCode](#)

PROFILE

First-year Computer Science undergraduate with hands-on experience building and deploying AI-powered applications, including PrimeChat (a self-built AI assistant) and AIRA-OS, an in-progress personal AI operating system. Also building an AI voice-agent automation business and Engineer-OS, a platform for engineering students. Comfortable working across the modern AI/automation stack (Claude, Gemini, Supabase, Vapi) and self-directed in learning new tools quickly. Seeking internship and hackathon opportunities to apply and grow these skills in a real team environment.

EDUCATION

Mallareddy University (MRU), Maisammaguda Campus, Hyderabad

B.Tech in Computer Science & Engineering (Core) • Expected Graduation: 2029

TMR-JC Rajendra Nagar Boys, Shamshabad

Intermediate (12th), Telangana State Board — 93.6%

TMREIS Khammam Boys

10th (SSC) — CGPA 9.0

PROJECTS

PrimeChat — Built & Deployed

- Designed and built a personal AI assistant from scratch in Python, deployed live on Render — the original hand-built precursor to AIRA-OS.
- Handled the full build cycle independently: architecture, model integration, deployment, and iteration across versions.

AIRA-OS — In Progress

- Building a futuristic, dark-mode personal AI Operating System & "second brain" — engineered with Flutter, FastAPI, Supabase (pgvector), and Groq (Llama 3.3).
- Features real-time streaming responses, long-term memory, and Google Workspace integration (Gmail, Calendar, Docs).

AI Voice Agent — Business Venture — In Progress

- Building an AI-powered 24/7 voice agent product (Twilio + Vapi) aimed at automating inbound call handling for institutions and small businesses.
- Independently developed the full business plan: tiered pricing packages, client pitch materials, and a legally-aware rollout plan for outbound calling.

Engineer-OS — In Progress

- Designing an all-in-one platform for engineering students — unifying syllabus-mapped learning, visual career skill-trees, and an AI-matched opportunity board.
- Architecting the system with Supabase, a verified test-driven build process, and a phased rollout starting with a single-branch pilot.

SKILLS & TOOLS

- Programming: Python (SoloLearn Certified), HTML/CSS Basics
- AI & LLMs: Prompt Engineering, AI/LLM Fundamentals, Claude & Gemini APIs
- Platforms & Tools: Git & GitHub, Render (Deployment), Supabase, Vapi, Antigravity
- Core Strengths: Self-directed learning, independent project execution, fast tool adoption

ADDITIONAL

- Actively building a personal content presence documenting AI development and student entrepreneurship journey.
- Certifications: Python — SoloLearn.
